

Renzo Marchini is head of IT law and data protection at the London office of international law firm, Dechert LLP. Since 1994 he has specialised in information technology, e-commerce, information security and data protection law, as well dealing with all types of commercial and intellectual property issues, including outsourcing and technology transfers.

Over the last few years he has been involved in advising on and negotiating contracts for a number of systems integration projects "in the cloud", including recently a deployment of an insurance broker's proprietary system onto a virtualised platform, the outsourcing onto a similar distributed platform of the trading systems of a high frequency trading hedge fund and deployments for customers of well-known cloud providers such as salesforce.com.

Prior to qualifying as a solicitor he worked for a number of years as a software consultant for Logica, engaged in designing, programming and testing complex software applications. His technical expertise was mainly UNIX and C.

Renzo lectures and writes regularly on IT law, e-commerce and data protection. He contributed the chapter on IT law in Sweet & Maxwell's 2002 Exchange and Alternative Trading Systems (Edited by Dick Frase and Helen Parry). Recent articles he has authored have appeared in European Lawyer, Computers and Law, Compliance Monitor and World Data Protection Report.

He is currently writing a book *Cloud Computing: A Practical Introduction to the Legal Issues*, to be published by BSI British Standards Institute in September 2010.

Renzo is listed as a leading practitioner in the 2009 and 2010 editions of independent legal directory Chambers UK and is described as "*charming, cheerful and dedicated,*" "*extremely commercially minded - he doesn't waste time negotiating insignificant points*" and "*able to provide detailed explanations without being verbose.*"
